

Benefits

- Works in Excel
- Simple connection interface
- Powerful reporting and analytics
- Planning, forecasting and what-if capabilities
- Formula-free report definitions
- No intrusive formatting
- Built for the business user
- On-demand and trusted information
- Low total cost of ownership

BI-Analyzer

BI-Analyzer is an integrated business intelligence tool that delivers simple, yet powerful reporting, analysis, dashboarding and planning capabilities directly in Excel.

Works in Excel

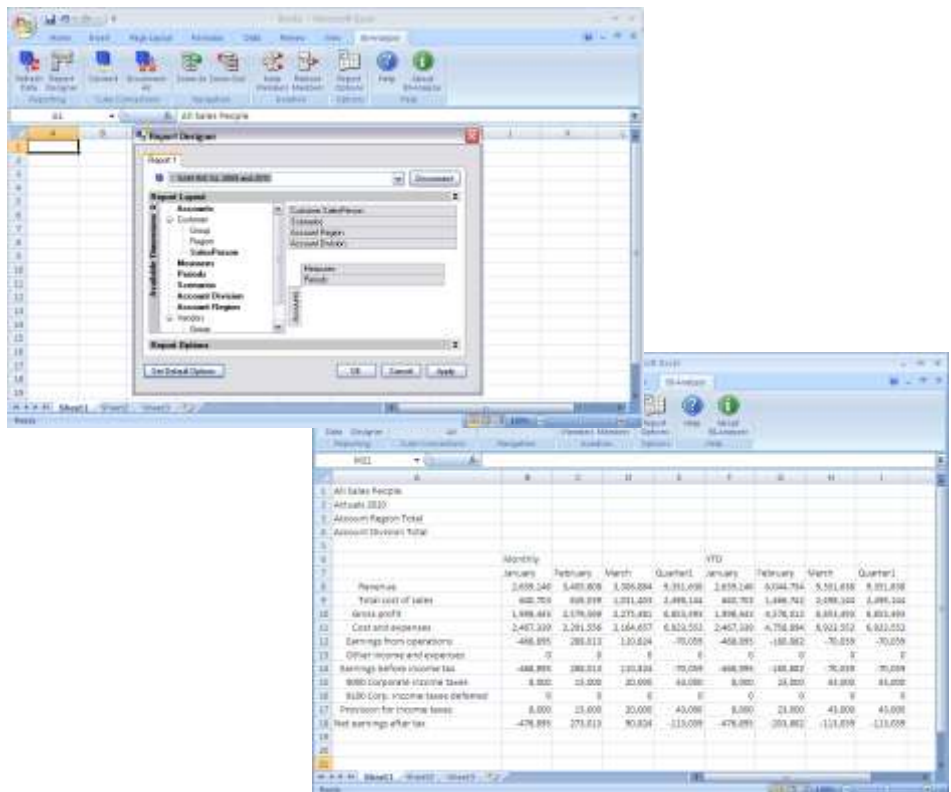

- Perform advanced analytics and reporting inside a familiar environment
- Leverage all of Excel's graphing, formatting and built-in analytical functionalities
- Reduce implementation and training costs

Simple connection interface to SQL Server cubes

- Allows you to control when to connect, read, and disconnect the cubes
- Facilitates changing a report to read a backup copy, test cube, or other similar cube
- Retains the most recent connection information for each worksheet

Robust reporting and analytical operations

- Drill-down to lower levels of detail and contracts back again
- Keeps or eliminates members or sections
- Pivots dimensions between the page, row and column headers
- Rank or sort on any dimension to isolate different areas of your business for better decision making

Benefits

Works in Excel

Simple connection interface

Powerful reporting and analytics

Planning, forecasting and what-if capabilities

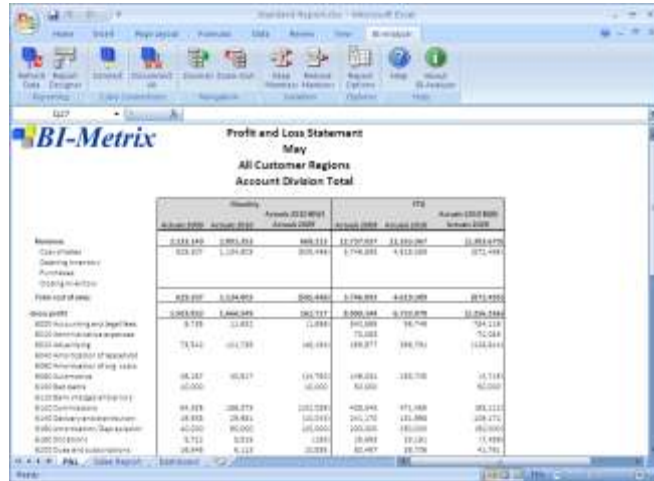

Formula-free report definitions

No intrusive formatting

Built for the business user

On-demand and trusted information

Low total cost of ownership

Powerful planning, forecasting and what-if analysis

- Enables timely and thorough what-if analysis
- Provide users with a simple and intuitive way to plan across multiple dimensions (e.g., product, geography, customer, etc.).
- Easily build, modify, and maintain multidimensional financial models directly in Excel

Drill-through to lower levels of detail

- Facilitates drill-through to view the underlying detailed data for a selected cell
- Presents friendly interface to confirm drill-through selection and limits
- Places drill-through data on a neighboring worksheet

No intrusive formatting on the worksheet

- Does not impose visible pick lists, buttons or layout borders
- Reports can be formatted any way you want for viewing and printing
- Allows you to insert extra rows and columns that can contain calculated fields or data from external sources
